

AWS Lambda Function Creation Documentation

This document explains the process of creating, deploying, and testing an AWS Lambda function using Python runtime in AWS Console.

Step 1: Open AWS Lambda Dashboard

Opened AWS Management Console and navigated to AWS Lambda service.

Step 2: Create Function

Selected 'Author from Scratch', entered function name and selected Python runtime.

Step 3: Configure Settings

Configured runtime and additional settings before creating the function.

Step 4: Function Created Successfully

AWS successfully created the Lambda function and displayed the function overview page.

Step 5: Code Deployment and Testing

Added Python code, deployed the function, created a test event, and executed successfully.

Conclusion

The AWS Lambda function was successfully created, deployed, and tested using Python runtime. The execution returned a successful response with status code 200 and message 'Hello from Lambda!'.
